

Effective October 1, 2018, we began to offer a new functionality, real time benefit check (RTBC).

RTBC gives providers access to patient-specific formulary and pharmacy benefit information through their electronic medical record (EMR) or electronic health record (EHR) system during the electronic prescribing process.

Please note that providers need the most current version of their EMR/EHR system that will support RTBC and its functionality.

Additional information

Providers should to contact their EMR/EHR vendor for additional information.#
